
SPECIAL ISSUE ON

RESEARCH ON WATER POLLUTION

CALL FOR PAPERS

In our journal *Pollution Study*, a special issue is calling for papers about water pollution.

Pollution, or environmental pollution, is the introduction of any substance or any form of energy to the environment at a rate faster than it can be decomposed, dispersed, recycled, diluted, or stored in a certain harmless form. It is caused by natural effects or human activities. Common major types of pollution contain water pollution, air pollution, soil contamination, light pollution, noise pollution, plastic pollution, radioactive contamination, thermal pollution, visual pollution and so on.

Pollution harms the environment and human health is being destroyed by the polluted environment. Due to contamination of drinking water by untreated sewage in developing countries, water pollution causes approximately 14,000 deaths per day. On October 31st, 2021, the United Nations Climate Change Conference COP26 was held in Glasgow, it put forward four goals, and water was at the center of all of them because the climate crisis is a water crisis.

The problem of water pollution is a common concern for all mankind. That's why we decide to set up a special issue about water pollution. All topics about water pollution are welcome, such as **causes of water pollution, effects of water pollution, solutions or control of water pollution, ocean pollution, water pollutants, cases, etc.**

For more details, you can view them via the following link: <https://aber.apacsci.com/si.php/index/detail?id=42>

Submission Deadline: August 24, 2023

Publication Date: Jan 2024

SI Website: <https://aber.apacsci.com/si.php/index/detail?id=42>

This Issue is now open for submissions. Manuscripts should be submitted online at aber.apacsci.com by registering and logging in to this website. Then you can submit the manuscripts.

Papers are published upon acceptance, regardless of the Special Issue publication date.
